Index of subjects

Ag_3Mg, analysis of a defect in ordered, 163
Alcian Blue, replacement for, 373
Alloys, amorphous and partially crystalline, structure of, 63
  initial stages of ordering in, 125
  short range order in, using dark-field electron microscopy, 113
Amorphous materials, observation of, 19
Analytical electron microscopy, preparation of human spermatozoa, 241
Apparatus, use in matched freeze-fracture replication, 249
Arsenic, amorphous, structures of, 29
Autoradiographic demonstration of receptor sites, 199
Axial bright field electron microscopy imaging techniques, 3

Bright field imaging techniques, 3

Carbonaceous materials, HREM of some, 99
Cells, whole, receptor sites on surface of, 199
Cellular shrinkage, procedure to minimize, 213
Cholesterol, oxidation in staining method for, 427
Chromosomes, dye binding, mechanisms in, 397
Cold rolled amorphous Cu_{60} Zr_{40}, 45
Colonic mucins, identification of sialic acids in, 415
Computational procedures, fast, for simulation of structure images, 141
Cone, hollow, imaging techniques, 3
Conformational changes, 407
Comparison macroscope, a new, 257
Cu_4 Ti phase, β ordering phenomena in, 153
Corinth 275 electron microscope, improvements for, 283
Conversion, automatic pumping, for Philips EM-200, 289
Crystallization in $Na_2O.2$ CaO.3 SiO_2 glasses, 73
Crystals, complex or disordered, simulation of structure images, 141

Dark field electron microscopy in short-range order in alloys, 113
Defect in ordered Ag_3Mg, analysis of a, 163
Defects in cold rolled amorphous $Cu_{60}Zr_{40}$, 45
Defects in sigma phase in a stainless steel, 169
Dimensional stability in tissues, 233
Dye binding mechanisms in chromosomes, 397
Dyes, cationic phthalocyamin, 373

Electron diffraction, ordering in alloys, 125
Electron phase microscopy at 1 MeV, 91

$Fe_{80}B_{20}$, ageing of, 53
Feulgen acid hydrolysis, mechanisms of, 391
Fibres, elastic, staining of, 357

G-banding of chromosomes, 397
Glass–crystal interfaces, high resolution studies of, 81
Glass, metallic, $Fe_{80}B_{20}$, ageing of, 53
Graphite crystal supports, electron phase microscopy, 91

High Resolution Electron Microscopy, structure of amorphous arsenic, 29
  structure of metallic alloys, 63
High Resolution Electron Microscopy, of carbonaceous materials, 99
High Resolution imaging of defects in a stainless steel, 169
High Resolution Microscopy, initial stages of ordering in alloys, 125
High Resolution studies of glass-crystal interfaces, 81
High Resolution and Voltage, amorphous materials at, 19
Hydrolysis, mechanisms of Feulgen acid, 391

Images, computational procedures to simulate structure, in crystals, 141
Imaging of defects in a stainless steel, 169
Imaging techniques, comparison of, 3

Kinetics, microdensitometric method to analyse staining, 331

Light Microscopy, receptor sites on surface of cells, 199

Macroscope, a new comparison, 257
Mallory's phosphotungstic acid–haematoxylin stain, 383
Mechanisms, dye binding, in G-band chromosomes, 397
  Feulgen acid hydrolysis, 391
  of Mallory's stain, 383
Membrane, topo-optical staining, 407
Metallic glass $Fe_{80}B_{20}$, ageing of, 53
Microdensitometric method to analyse staining kinetics, 331
Microspectrophotometric studies of blood cells, 313

Na_2 0.2 CaO. $3SiO_2$ glasses, early stages of growth, 73
Neurone profiles, intensification of, 267
Ni_3P, observations on, 39

Ordering phenomena in β Cu_4 Ti phase, 153

Hydrolysis, mechanisms of Feulgen acid, 391

Images, computational procedures to simulate structure, in crystals, 141
Imaging of defects in a stainless steel, 169
Imaging techniques, comparison of, 3

Kinetics, microdensitometric method to analyse staining, 331

Light Microscopy, receptor sites on surface of cells, 199

Macroscope, a new comparison, 257
Mallory's phosphotungstic acid–haematoxylin stain, 383
Mechanisms, dye binding, in G-band chromosomes, 397
  Feulgen acid hydrolysis, 391
  of Mallory's stain, 383
Membrane, topo-optical staining, 407
Metallic glass $Fe_{80}B_{20}$, ageing of, 53
Microdensitometric method to analyse staining kinetics, 331
Microspectrophotometric studies of blood cells, 313

Na_2 0.2 CaO. $3SiO_2$ glasses, early stages of growth, 73
Neurone profiles, intensification of, 267
Ni_3P, observations on, 39

Ordering phenomena in β Cu_4 Ti phase, 153

Oxidation, preliminary, staining method for cholesterol, 427

Philips EM–200, automatic pumping conversion, 289
Photomicrographic attachments, 273
Polytypism, using RHEED to study, 189
Profiles, meurone, intensification of, 267

Quantitative cytochemistry, 295

RHEED, to study polytypism, 189
Replication, matched freeze-fracture, apparatus for, 249
Romanowsky stained blood cells, 313

Scanning Electron Microscopy, methodological basis of insulin receptor sites, 199
preparation of human spermatozoa, 241
Shrinkage, cellular, procedures to minimize, 213
Sigma phase in a stainless steel, defects in, 169
Sialic acids in colonic mucins, identification of, 415
Silicon carbide, transformation structure in, 177
Spermatozoa, human, preparation of, 241
Stability, dimensional, in tissues, 233
Stain, Mallory's mechanism of, 383
Staining, differential, intensification of neurone profiles, 267
Staining methods for cholesterol, 427
Staining methods, protein, in quantitative cytochemistry, 295
Staining, kinetics, 331
Staining, replacement for Alcian Blue, 373
Staining, structure–staining relationships, 345, 357
Staining, topo-optical, glycoprotein conformation changes, 407
Steel, stainless, imaging of defects in, 169
Structure–staining relationships, 357
Subtraction analysis of a standardized procedure, 313

Transformation structures in silicon carbide, 177
